Summary

Back-end/Full Stack developer with more than 4 years of experience in the Node.js ecosystem (Nest, React, Angular.js, Express), including work as Tech Lead of a squad of developers. My most recent highlights were cutting the generation time of critical reports by 95% and the response time of queries on databases with tens of thousands of records by 90%, migrating legacy architectures to microservices with asynchronous messaging and Clean Architecture. I am looking for a remote senior position where I can keep leading teams technically and solving real scale problems.

Key Skills

- **Languages & Frameworks:** Node.js, TypeScript, JavaScript, Express, Next.js, React, Nest.js.
- **Databases:** PostgreSQL, MySQL, MongoDB, DynamoDB and GraphQL.
- **Messaging:** RabbitMQ, BullMQ and AWS SQS.
- **Software Architecture:** Clean Architecture, DDD, TDD, Microservices, SOLID, Design Patterns.
- **Infrastructure & Quality:** AWS, Azure, Multicloud, Docker, CI/CD, Automated Testing (Jest).

Professional Experience

Poder360, Brasília / On-site — Senior Full Stack Developer

MAY 2025 - JULY 2026

- Cut manual work by more than 95% (from 1 week to under 20 minutes) in the generation of newsroom reports, by building a complete dashboard (Nest.js) with a messaging architecture (BullMQ) that collects the data, generates PDFs and e-mails them automatically on a schedule.
- Built an AI chatbot specialized in news about the 3 branches of government (Executive, Legislative and Judiciary), able to retrieve information from a database of more than 50,000 documents, structuring a Python back-end with a RAG architecture and data chunking techniques.
- Drastically reduced server response time by 90% (from 25~30s to 3~5s) on a database of more than 14,000 electoral voting-intention polls, by restructuring the search engines, adding database indexes (MongoDB) and caching queries with Redis.
- Increased the security and reliability of data ingestion for the electoral poll aggregator, reworking more than 9 forms with input and output data validation, UI/UX improvements and access management.
- Led the organization and delivery of a team of 4 developers as Tech Lead, introducing agile practices (backlog management, sprint planning/review) and running regular 1:1 meetings.
- Improved DevOps operations with fully automated, reliable deployments with rollback for more than 3 critical systems, migrating manual SSH/PM2 processes to CI/CD pipelines built with Jenkins, Docker and Kubernetes.

Skills: Node · Git · Python · Azure DevOps · Cursor · Jenkins · Nest.js · TypeScript · Next.js · Jest · Redis · Docker · React · MongoDB · MySQL · Kubernetes · PostgreSQL.

Stefanini Brasil, Brasília / Remote — *Full Stack Developer*

OCTOBER 2023 - MAY 2025 -- Mid-level Back-end Developer

- Worked on refactoring the legacy backoffice system that serves more than 7,000 gas stations across Latin America, using Node.js, TypeScript and AWS SQS/DLQ under Clean Architecture principles.

- Worked on the development of the international payment engine, implementing the Lambdas that handled transactions in a microservices architecture, using AWS Lambda and DynamoDB.
- Improved unit testing to keep production releases stable, writing 15% of a suite of 1,500+ tests using Node.js, TypeScript and Jest.
- Worked on implementing PIX (Brazilian instant payment) as a payment method, reaching production in record time and taking part from design, development and testing through to following sign-off and rollout in the client's production environments.
- Actively worked on modernizing the payment engine for Ford dealership owners (Ford's bank loan system for its dealers), helping translate business rules from a mainframe and building a robust system that serves all of Brazil.

JANUARY 2022 - SEPTEMBER 2023 -- Junior Full Stack Developer

- Developed E2E tests, raising coverage from 25% to 74%, and was responsible for refactoring more than 140 scrapers of the Shell Box app.
- Worked on the payment checkout serving more than 20 million users, migrating parts of a monolith and separating contexts with DDD into a microservices architecture, using TypeScript, Node.js, Jest and Clean Architecture.
- Led the delivery of a liquidity and fee control feature for gas station owners, working directly with POs to understand the business and with Tech Leads from other squads to learn the best practices in use; this led to a delivery 25% faster than expected, clearing the backlog, using Angular.js and Node.js.

Skills: AWS · Terraform · Java · Spring · Spring Security · SQL · JUnit · Mockito · DynamoDB · Node · Git · Angular.js · Angular · TypeScript · Jest · Clean Architecture.

Education

IFB - Federal Institute of Brasília — *Undergraduate:* Technologist Degree in Internet Systems.

JULY 2017 - DECEMBER 2021

Languages

Portuguese - Native

English - Advanced (Reading, Writing and Speaking)
